

Product Overview

Intelligent management of dynamic distribution groups

The software Ingentis *distribution.list* is an easy to use solution for the automated management of dynamic distribution groups and security groups. The members of a dynamic group are determined based on custom conditions which

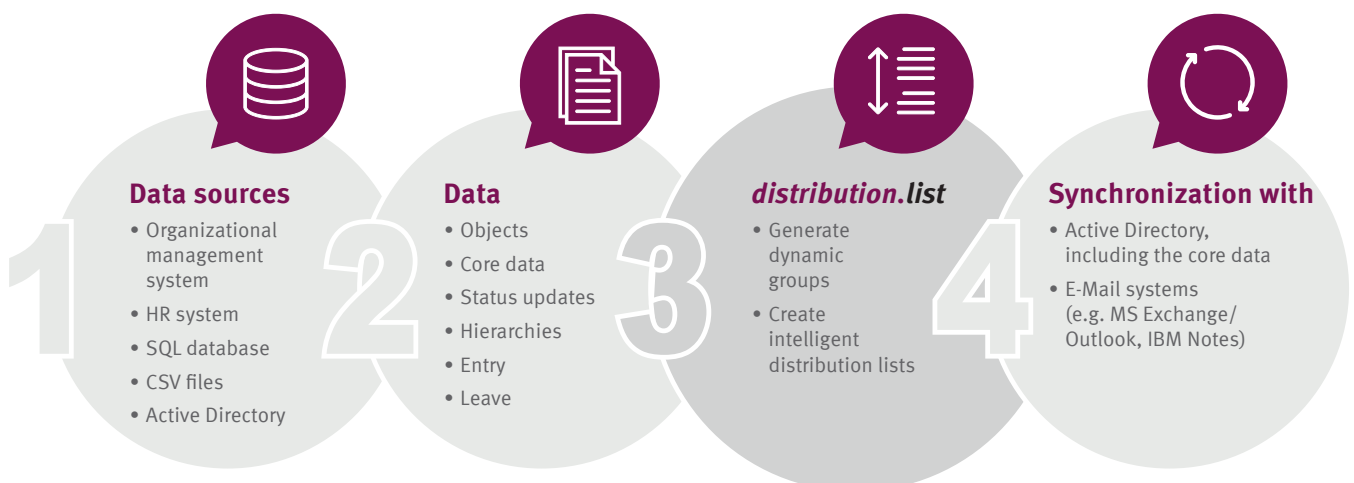

can easily be configured according to your requirements. The dynamic distribution groups can be synchronized with leading systems such as Active Directory, Exchange, O365 or IBM / Lotus Notes.

Integrating Ingentis *distribution.list* into your existing landscape

Ingentis *distribution.list* closes the gap between leading data sources such as your HR system and your Active Directory, O365, IBM / Lotus Notes or other target systems. Data that has been newly added to the source system is regularly transferred, e.g. on a daily basis. This applies to a user's master data as well as

their structural assignment. After applying the custom conditions, the updated groups can be synchronized with your target system. This ensures up-to-date groups which can be used as E-mail distribution lists, as security groups or as universal groups.

Ingentis *distribution.list* Intelligent distribution groups

Key features

Interfaces to leading data sources

Thanks to standard interfaces, Ingentis distribution.list can easily be connected to numerous data sources. This includes leading HR systems such as SAP HCM, SAP SuccessFactors, Oracle HCM, PeopleSoft, or Workday but SQL / Oracle data bases, Active Directory or flat files as well.

Use of dynamic criteria

Ingentis distribution.list identifies the group members based on configurable conditions. Users matching the pre-defined criteria are added to the membership list. The dynamic criteria can be configured without any coding skills required, hence also enabling users outside of the IT department to be in charge of such task.

Synchronization of distribution lists with target systems

Distribution lists created with Ingentis distribution.list can be synchronized automatically and time-controlled with your existing Active Directory or mailing system. Interfaces are available for MS Exchange/Outlook, Active Directory, O365 and Lotus Notes.

Data synchronization

Does your IT department still update HR data manually in the Active Directory? Ingentis distribution.list carries out this task automatically. All you need to do is define which attributes of the Active Directory must be updated – distribution.list will do the legwork.
