

org.manager [web] for SF

Org charts from SAP SuccessFactors™ on the SAP® Cloud Platform

The challenges of visualizing organizational charts are continuously increasing. Two indispensable requirements for org chart tools are the unlimited configuration of content as well as the availability of an attractive and modern visual format. Thanks to its preminent features, Ingentis org.manager [web] for SF is able to fulfill these and many more expectations. In addition, it seamlessly integrates into SAP SuccessFactors Employee Central.

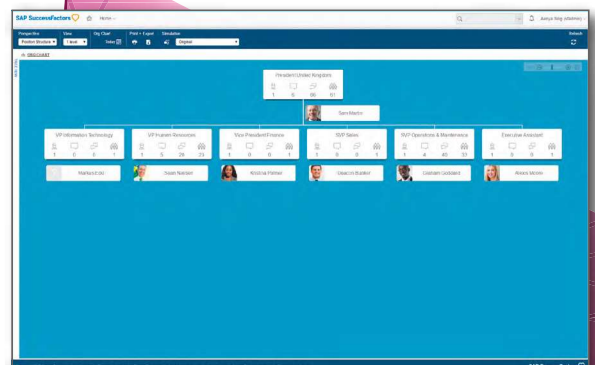

Perfect integration

Running on the SAP Cloud Platform, Ingentis org.manager [web] for SF can conveniently be launched directly through the SAP SuccessFactors user interface, including single sign-on. The user can select himself or any colleague in SAP SuccessFactors to directly access the org chart at the respective position. Within seconds, the org chart visualizes any kind of structure (e.g. organization view) including all of the persons.

Flexible structures

With Ingentis org.manager [web] for SF any structure maintained in SAP SuccessFactors can be visualized. Such can include all of the objects (Legal Entity, Business Unit, Division, Department, Location, Cost Center), individual MDF objects and all relations. However, the tool is not limited to displaying data from SAP SuccessFactors. Data from SAP or any other system can be merged easily.

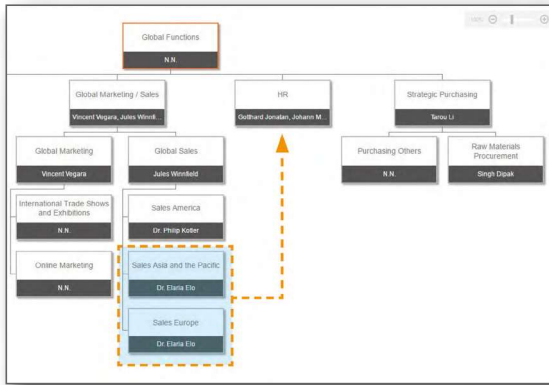

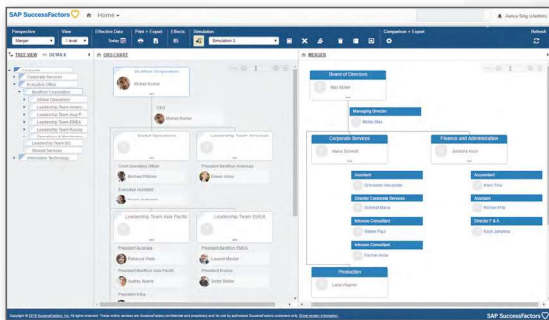

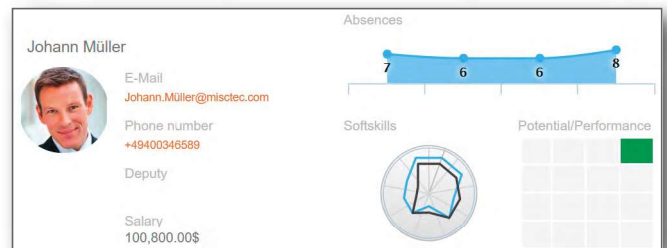

Individual Design

Due to the tool's comprehensive setup possibilities, the content and design of your org chart can be edited to offer several options and to adjust to changing requirements.

Animations visualize the navigation across the organizational chart and individual boxes display diverse data with just one mouse click. In addition, visualization rules enable the editing of the org chart's display during run time in order to focus on particular aspects: Should certain positions be displayed or not? Should employees with particular qualifications be emphasized?

To make the best use of the available space, the content of the boxes adjusts to the zoom level.

Simulations

The simulation function allows you to simulate multiple plan versions and scenarios directly within the existing organizational chart. Simulations can be created in a powerful and user-friendly manner – from restructurings via drag & drop and the creation and removal of departments, individual employees or vacancies, to editing attributes. During M&A projects additional data can easily be imported. With two org charts displayed side by side, it is possible to move objects from one to the other via drag & drop.

As reorganizations can turn into a lengthy process, SAP SuccessFactors Intelligent Services offers real-time updates of the simulation database reflecting the changes in the HR system. This way, we can keep simulations in sync with the current organizational structure of the company.

The comparison of datasets enables a detailed overview of simulation for any desired key date. Structural changes can be checked easily and transferred to SAP SuccessFactors in a manual or semi-automated way.
